

a Same mean age, different spread and shape

means 61.5 vs 61.3 (dashed); SD 12.3 vs 11.4; skewness -0.07 vs -0.34

b Signal lies beyond the location component

t-test $p = 0.49$, Wilcoxon $p = 0.89$; smooth test $p < 0.001$

c Detectability at trial-scale sample sizes

2,000 resamples per point; permutation critical values
